

# UK federated access management experience

Mark Williams

- 
- About UK and JISC and JISC Collections
  - Overview & brief history of Federated Access Management (FAM)
  - How FAM works in UK – Who does what
  - How we have made it work
  - Challenges of the future about FAM

- Funding: Top sliced, all of the UK University and College funding bodies
- Mission: Provide world-class leadership in the innovative use of Information and Communications Technology to support education and research.
- Method:
  - Infrastructure – JISC National Data Centres
  - Services – JISC Collections, JISC Legal, Plagiarism Advisory Service, Regional Support Centres
  - Leadership – Advocacy on issues such as Open Access, Intellectual Property, Access management
- 8 strategic themes – Network, Access Management, Information Environment, e-Resources, e-Learning, e-Research, e-Administration, Business and Community Engagement
- 120 million dollars – 40% on JANET network

- Established as a mutual trading company in 2006
  - Members include all UK HE, FE and Research Councils
- National centre for the licensing and procurement of digital content to support education and research
- Mission: **To negotiate affordable agreements for relevant digital content under licensing terms that maximise adoption and use**
- In 2009, savings to the JISC community from JISC Collections activities are estimated at £43 million

■ Aims -

- Save time and money through **central licensing** and negotiation that leverages buying power and avoiding duplication of effort
- Widen accessibility to online content through **best value pricing** of subscription resources and the **central procurement** of content
- **Help institutions manage the demands of licensing** and develop capacity within the sector to improve licence management

How does JISC Collections support that mission?

NESLi<sup>2</sup>

- **National Academic Archive**
  - Free in perpetuity
- **NESLi2 – Large publishers**
  - 40 E-journal agreements, Elsevier, Springer, Nature etc
- **NESLi2 SMP – Small and Medium Sized Publishers**
  - 16 agreements and growing
- **Over 90 agreements** for online databases, reference materials, multimedia resources and e-book collections

NESLi<sup>2</sup> SMP  
For small and medium sized publishers

JISC **collections**  
delivering resources online

- **Manage 7000 subscriptions**

- JISC model licences since mid-1990s
  - Used with all JISC Collections and NESLi2 agreements
  - Allows institutions and their users to get the best value from resources through flexible terms of use that offer stability and security to both users and providers
- The JISC Model licence is updated annually to take account of changes in:
  - The business, scholarly environment and information environment
- Aim is licensing developed by the education sector for the education sector with terms that allow the education sector to get on with the business of education

- There are different versions of the model licence dependent on format
  - NESLi2 model licence for e-journals
  - Datasets – most commonly used for A&I/Bibliographic databases, full text databases, reference works, image collections etc
  - E-books
  - Film and sound
- There are different versions of the model licence dependent on licensing arrangements
  - Contract and Licence
  - Licence and Sub-licence
- There are different versions of the model licence dependent on licensing model
  - Subscription
  - In perpetuity

- The model licence is the ideal that JISC Collections starts with – but it is a model and there are almost always modifications
- Always check the final licence
- Increasingly there is consensus about the terms of the model licence for permissions and restrictions
- Increasingly discussions focus on areas such as:
  - Inclusion of content in virtual learning environments
  - **Post termination access**
  - **New definitions for authorised users**
- In time consensus will emerge on these as well

# JISC Collections

## Some facts and figures

---

- We delivered over **£25million** in annual efficiency gains in 2008/09
- We delivered **£8.7 million** in annual efficiency gains through the **NESLi2** and **NESLi2 SMP** programmes
- There are **no price increases for 70% of renewals** we negotiated in 2008/2009
- We negotiated **annual opt out** clauses for all renewals and new agreements
- We started with the year 2007/2008 and are pleased to report that most collections are **being well used**. For example, between September 2007 and August 2008, over 2million articles were downloaded from the Oxford Journals Archive. An average price per download is 58p

### But it is not all perfect

- Procurement of licensed content from monopolies is tough ~ especially when we cannot cancel ~ the **30% who did not agree to 0% increase are the largest of the publishers**, and those with content that **cannot be substituted**

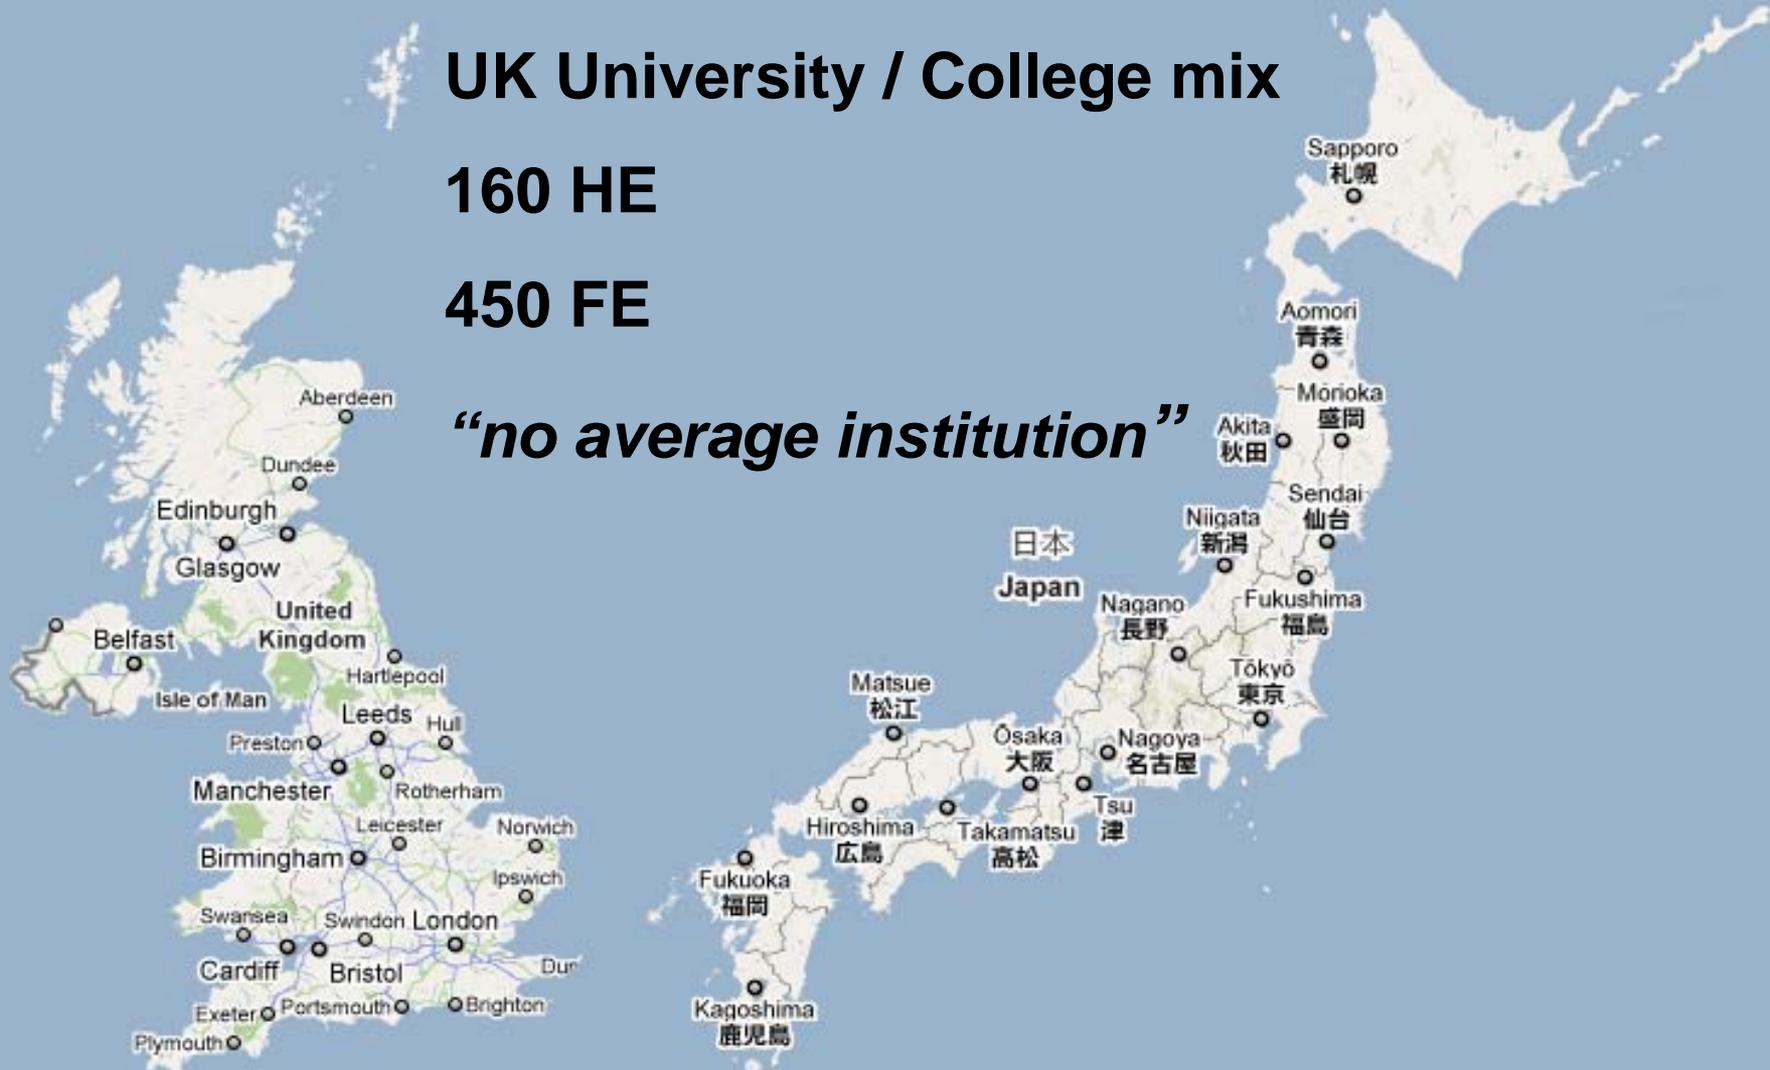

- **Projects and reports that review the current environment and look to meet future requirements of teaching, learning and research**
    - national e-books observatory project informing **publishers too**
    - e-books for FE
    - A comparative study of e-journal archiving solutions
  - **Providing tools to support institutional use and acquisition of electronic resources**
    - Academic Database Assessment Tool
  - **Supporting licensing requirements of JISC Programmes**
    - JISC Digitisation Programme
    - Copyright Advice and Support Project for Electronic Resources
- ...though all of these should support licensing and negotiation**

**UK University / College mix**

**160 HE**

**450 FE**

***“no average institution”***

**Challenge:** *Moving from an established legacy system to a new model*

**Old model = Eduserve Classic Athens**

**Problem:** *Inertia*

- Password username off campus
- Low Skill required (simple admin)
- Funded by top slice money
- It worked
- Widespread in UK

---

**Challenge:** *Moving from an established legacy system to a new model*

**Problem:** *Issues*

- Shift of work from the library to the IT service
- Costs
- Skills
- Inertia
- Publishers
- Culture....Culture....**Culture**

## Making the argument

- Briefing papers
- Events, events, events
- Case Studies
- Animation
- Business case tool kit
- Web 2.0 Blogs etc
- JISC Model Licence
- Culture...Culture...Culture

The collage features several key JISC outreach materials:

- Top Left:** A briefing paper titled "Connecting People to Resources: Federated Access Management Solutions: Guide for Institutions" (Third Party Providers of Federated Access Management Solutions). It includes an introduction and a list of 6 efficient steps for institutions to join the UK Federation.
- Top Right:** A colorful process diagram titled "Introduction" showing a path through 6 steps: 1. Join Federation, 2. Institutional Buyout, 3. Authentication Development, 4. Choose and Implement, 5. Support, and 6. Introduction. Each step includes a brief description of the required actions.
- Center:** A screenshot of an animation titled "JISC Federated Access Management" showing a person at a computer terminal with a stylized character.
- Bottom Left:** A screenshot of the JISC website's "Recent Posts" section, featuring a post titled "Service Provider best practice across the pond" by markwilliams on October 8th, 2009.
- Bottom Right:** A screenshot of the JISC website's navigation menu, including links for Home, About, Federated Access and Service Providers, Federated Access and Higher Education, Federated Access and Further Education, and Federated Apps.

# JISC Banding
